

MENDERS - MACHINED OR POLYPROPYLENE

Type of Mender	Specifications	Picture	Hose Size (mm)	Item Number
Ordinary	Ordinary menders have multiple machined serrations and are manufactured from standard steel piping. They are well matched to the mining hose which they are intended to join together and provide a satisfactory joint when used with wire or bolted clamps.		10	80
			12.5	79
			20	78
			25	77
			32	6441
			40	819
Holdfast	Holdfast hose menders really do "Hold Fast". Repairs or joins with these menders are permanent provided the clamping is by means of WRE heavy duty bolted type hose clamps. Like the Evertite connection these menders are on the Shaft Sinkers demand list.		25	1092
			32	6155
			40	1374
			50	1375
			80	1160
Polypropylene	These hose menders are for light duty applications and are not recommended for underground use.		10	11557
			12.5	11553
